

2nd Quarter Report 2018

1. REPORTING COMPLIANCE

This indicator represents the percentage of public health facilities that have submitted monthly reports.

District Wise Percentage of Reporting Compliance.

Graph shows district-wise reporting compliance of all the districts of Khyber Pakhtunkhwa. From district Shangla to District Peshawar achieved 100% reporting compliance. Districts (Dir Upper to Lakki Marwat) achieved the target i.e reporting more than 95% facilities. Districts Nowshera, Charsadda, Kohat and Kohistan (92%, 92%, 84% and 60%) reported below the target i.e (<95%) in 2nd quarter 2018.

2. General OPD Attendance (Primary Health Care Facilities & Secondary Health Care Facilities)

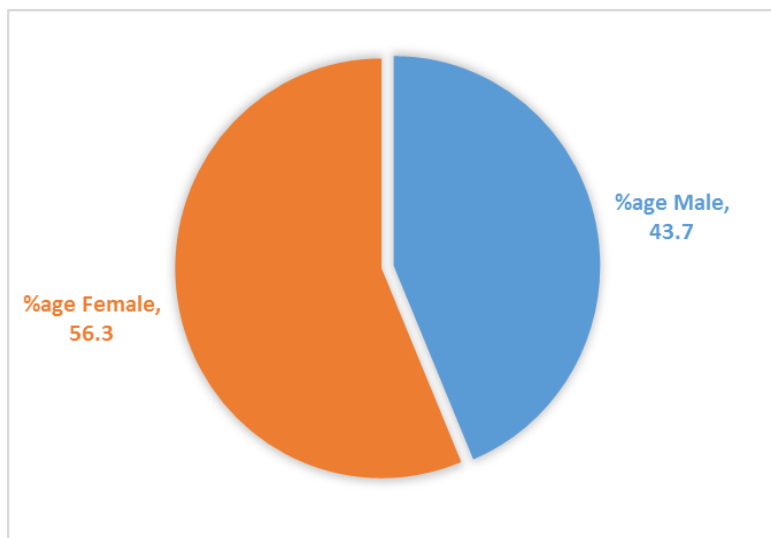

This is one of the key indicators to assess performance on the provision of health services in Province Khyber Pakhtunkhwa. It refers to the number of people attending and receiving services at health facilities during illness.

Graph shows the General OPD in primary and secondary care health facilities with gender wise breakup of male and female patients of the province.

Age wise breakup of patients visiting the OPDs is consistent in 2nd quarter 2018, the figures shows that in the case of male OPD attendance of age group under 1 year and 1 to 14 years are (268,544) and (1,090,731) which is 9.30% and 37.79% of the total of male OPD (2,886,255).

Similarly in case of female OPD attendance of age group under 1 year and 1 to 14 years is (241,099) and (1,046,542), which is 6.48% and 28.15% of the total female OPD attendance (3,718,347).

In General OPD Attendance (Primary & Secondary Health Care Facilities) 56.3% female and 43.7% male patients visited.

3. Specialty Wise Break Up of Patients

The indicator gives us an idea about the distribution of patients to different specialties enabling the reader to broadly categorize and assess the flow of patients to different specialties available in the health facilities.

Graph of the indicator **OPD Attendance Specialty wise** shows the percentage of total new visits (Patients) of in the facility to different specialties (i.e General OPD, Medicine, Surgery, Pediatric etc).

Total new cases (Specialty wise) in 2nd Quarter 21018			
4156691			
S. No	Specialty	New Visits	%age
1	Emergency/Casualty	1159081	27.88
2	General OPD	1019367	24.52
3	Pediatric	464861	11.18
4	OB/GYN	272793	6.56
5	Medicine	270829	6.52
6	Surgery	158944	3.82
7	Eye	146710	3.53
8	Dental	145429	3.50
9	Orthopedics	133072	3.20
10	ENT	122798	2.95
11	Others	103056	2.48
12	Skin	95473	2.30
13	Cardiology	51046	1.23
14	Pshychiatry	24115	0.58
15	Homeo Cases	18466	0.44
16	Tibb/Unani Shifa Khana	11925	0.29

Under the heading emergency/casualty, the number and percentage of patients are on top and stands at **(1,159,081)** with **27.88%**, General OPD on second number and is **(1,019,367)** which is **24.52%**.

Number of patients in the specialty of Pediatric and OB/Gynea are **464,861** and **272,793** which is **11.18%** and **6.56%**.

The disorder of Dental caries and the specialty Skin Diseases stands at **145,429** with **3.50%** and **95,473** with **2.30%**.

The specialty of Tibb/Unani Shifa Khana stands at the bottom and the figures are **11,925** with **0.29** percent.

4. Diseases Pattern in Out Patient Department (of the total 43 priority diseases)

This indicator will help to understand which disease/cases were attended at the health facilities in a district.

The indicator can trigger a response in terms of additional resources allocation or redistribution of resources according to the disease pattern, or initiating specific preventive, promotive and or curative services at specific area/catchment population.

For the purpose of the DHIS 43 diseases have been selected as “Priority Diseases” in consultation the other stakeholders, the Government of Khyber Pakhtunkhwa has adopted these enlisted priority diseases in continuation to the national decision.

These diseases are listed in below table, which present the numbers of patients provided care at Primary and Secondary Level Health Facilities.

Total OPD 2nd Quarter (April to June 2018)			
6604602			
S.No	Disease	Total	%age
1	Acute (upper) Respiratory Infections (ARI)	704108	10.66
2	Diarrhoea/Dysentery in under 5 yrs	329807	4.99
3	Diarrhoea/Dysentery in >5 yrs	268042	4.06
4	Fever due to other causes	254409	3.85
5	Urinary Tract Infections	226320	3.43
6	Hypertension	177624	2.69

7	Dental Caries	153054	2.32
8	Peptic Ulcer Diseases	138228	2.09
9	Suspected Malaria	109243	1.65
10	Diabetes Mellitus	96884	1.46
11	Worm infestation	87012	1.31
12	Scabies	80322	1.21
13	Road traffic accidents	68004	1.03
14	Enteric / Typhoid Fever	66052	1.00
15	Otitis Media	60065	0.90
16	Depression	57399	0.86
17	Asthma	56328	0.85
18	Dermatitis	54227	0.82
19	Pneumonia under 5 years	34413	0.52
20	Pneumonia >5 years	24718	0.37
21	Fractures	24083	0.36
22	Ischemic Heart Disease	22515	0.34
23	TB Suspects	19591	0.29
24	Chronic Obstructive Pulmonary Diseases	15831	0.24
25	Suspected Viral Hepatitis	14709	0.22
26	Cataract	13051	0.19
27	Dog bite	12498	0.18
28	Suspected Measles	9153	0.13
29	Benign Enlargement of Prostate	7352	0.11
30	Snake bites (with signs/symptoms of poisoning)	7316	0.11
31	Burns	7253	0.11
32	Drug Dependence	5918	0.09
33	Sexually Transmitted Infections	5667	0.08
34	Epilepsy	5025	0.07
35	Trachoma	4337	0.06
36	Cutaneous Leishmaniasis	3023	0.04
37	Glaucoma	2885	0.04
38	Nephritis/Nephrosis	2722	0.04
39	Cirrhosis of Liver	2325	0.03
40	Suspected Meningitis	1275	0.01
41	Suspected Neonatal Tetanus	410	0.006
42	Acute Flaccid Paralysis	110	0.002
43	Suspected HIV/AIDS	0	0
Total		3233308	48.96

Top Ten Diseases (of the total 43 priority diseases) Khyber Pakhtunkhwa Province

Acute Respiratory Infections stands **704,108** which is **10.66%** of these patients. Diarrhoea/Dysentery under and over 5 year's stands **329,807** with **4.99%** and **268,042** with **(4.06%)** of the total in 2nd quarter 2018. Fever due to other causes stands at **254,409 (3.85%)** patients.

Cases of Urinary Tract Infections and Hypertension disorders are **226,320** which are **3.43%** and **177,624 (2.69%)** of the total patients. Dental Caries and Peptic Ulcer Diseases are **153,054** with **2.32%** and **138,228** with **2.09%** in 2nd quarter 2018.

Suspected Malaria patients' in 2nd quarter 2018 stands **109,243** with **1.65%**. Diabetes Mellitus cases are reported **96,884** with **(1.47%)**.

5. COMMUNICABLE AND NON COMMUNICABLE DISEASE

Out of 43 priority diseases, 19 are communicable and 24 are non-communicable diseases. Subsequent analysis shows the most common diseases and disease-wise breakup.

In 2nd quarter 2018, total numbers of communicable diseases are **1761992 (26.68%)**, whereas non-communicable diseases are **1471316 (22.28%)**.

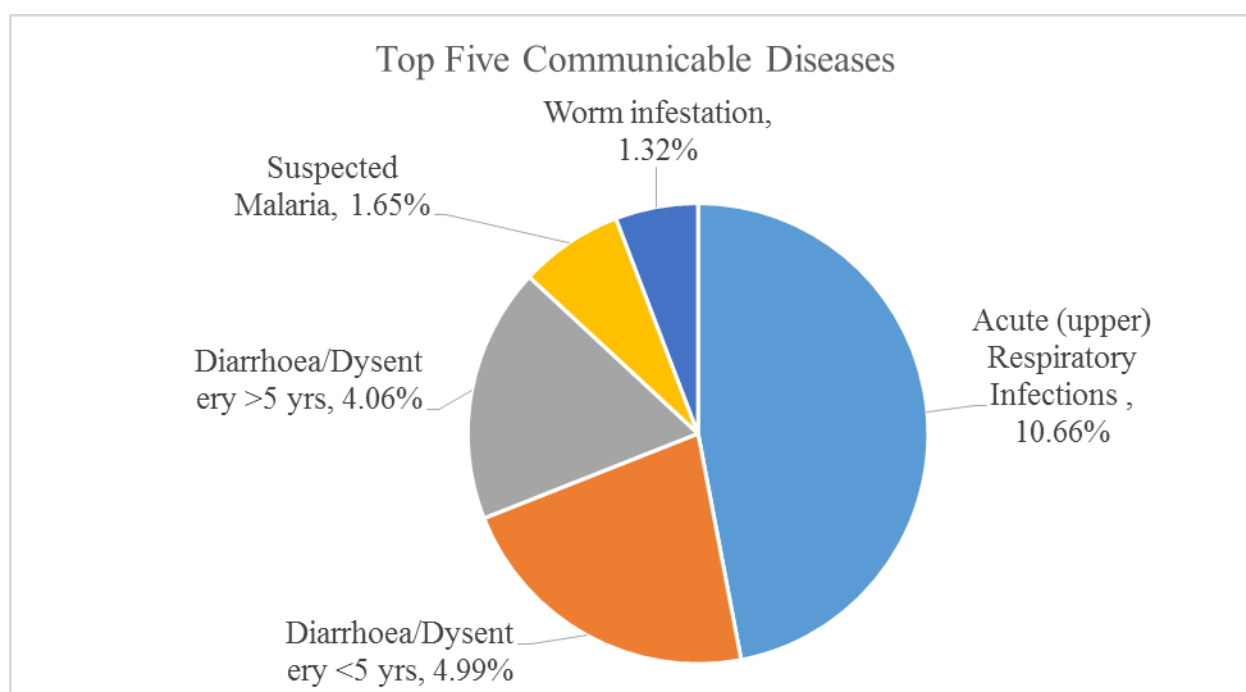

a. COMMUNICABLE DISEASES

Communicable disease is an infectious **disease** transmissible (as from person to person) by direct contact with an affected individual or the individual's discharges or by indirect **means** (as by a vector) compare contagious **disease**.

Total OPD 2nd Quarter (April to June 2018)		6,604,602	
S.No	Disease	Total	%age
1	Acute (upper) Respiratory Infections	704108	10.66
2	Diarrhoea/Dysentery <5 yrs	329807	4.99
3	Diarrhoea/Dysentery >5 yrs	268042	4.06
4	Suspected Malaria	109243	1.65
5	Worm infestation	87012	1.32
6	Scabies	80322	1.22
7	Enteric / Typhoid Fever	66052	1.00

8	Pneumonia under 5 years	34413	0.52
9	Pneumonia >5 years	24718	0.37
10	TB Suspects	19591	0.30
11	Suspected Viral Hepatitis	14709	0.22
12	Suspected Measles	9153	0.14
13	Sexually Transmitted Infections	5667	0.09
14	Trachoma	4337	0.07
15	Cutaneous Leishmaniasis	3023	0.05
16	Suspected Meningitis	1275	0.02
17	Suspected Neonatal Tetanus	410	0.006
18	Acute Flaccid Paralysis	110	0.002
19	Suspected HIV/AIDS	0	0
Total		1761992	26.68

Acute Respiratory Infections and diarrhea/dysentery under and over 5 years constitute **19.71%** of these patients. Worm infestation stands at **87,012** with **1.32%** patients in 2nd quarter 2018. Suspected Malaria cases reported are **109,243** in figures and **(1.65%)** in percentile in 2nd quarter 2018. The department should take adopt programmatic approach to control the disease.

b. NON-COMMUNICABLE DISEASES

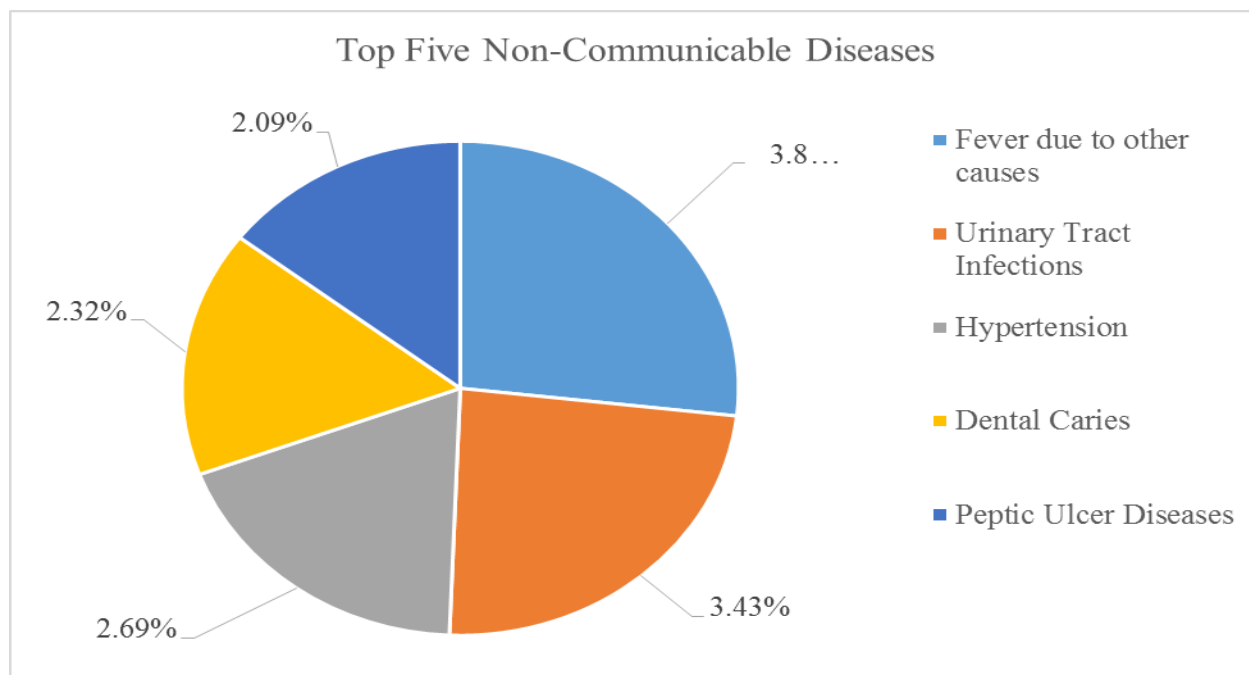

A **non-communicable disease** (NCD) is a medical condition or **disease** that is not caused by infectious agents (**non-infectious** or **non-transmissible**). NCDs can refer to chronic **diseases** which last for long periods of time and progress slowly.

NCDs are the leading cause of death globally.

Table and Graph illustrates the trend of non-communicable diseases in Khyber Pakhtunkhwa province during 2nd quarter 2018

Total OPD 2nd Quarter (April to June 2018)				6604602
S.No	Disease	Total	%age	
1	Fever due to other causes	254409	3.85	
2	Urinary Tract Infections	226320	3.43	
3	Hypertension	177624	2.69	
4	Dental Caries	153054	2.32	
5	Peptic Ulcer Diseases	138228	2.09	
6	Diabetes Mellitus	96884	1.47	
7	Road traffic accidents	68004	1.03	
8	Otitis Media	60065	0.91	
9	Depression	57399	0.86	
10	Asthma	56328	0.85	
11	Dermatitis	54227	0.82	
12	Fractures	24083	0.36	
13	Ischemic Heart Disease	22515	0.34	
14	Chronic Obstructive Pulmonary	15831	0.24	
15	Cataract	13051	0.19	
16	Dog bite	12498	0.18	
17	Benign Enlargement of Prostrate	7352	0.11	
18	Snake bits (with signs/symptoms of poisoning)	7316	0.11	
19	Burns	7253	0.11	
20	Drug Dependence	5918	0.09	
21	Epilepsy	5025	0.07	
22	Glaucoma	2885	0.04	
23	Nephritis/Nephrosis	2722	0.04	
24	Cirrhosis of Liver	2325	0.03	
Total		1471316	22.28	

The fever due to other causes and Urinary Tract Infections in table stands at **254,409 (3.85%)** and **218,730 (3.35%)** in 2nd quarter 2018.

6. Lab Services Utilization for Out Door Patients

This indicator indicates the utilization of laboratory services at the facility and also gives a measure of the proportion of outdoor patients receiving diagnostic services from health facility.

# of OPD Patients	6,617,844
Lab Investigation	18.39%
X-Rays	3.63%
Ultrasonography	2.14%
ECG	1.04%
CT Scan	0.08%

The graph reflects the figures and show quality of care in terms of utilization of investigation services.

7. Lab Services Utilization for In Door Patients

This indicator indicates the utilization of laboratory services at the facility and also gives a measure of the proportion of indoor patients receiving lab services from the laboratory of the health facility. In addition statistics are gathered for other diagnostic investigations.

No. of Admissions	166,797
Lab Investigation	150.25%
X-Rays	22.5%
Ultrasonography	17.04%
ECG	7.13%
CT Scan	7.02%

8. Average number of Antenatal Care Services in the Facility

Antenatal care is an indicator of access and utilization of health care services during pregnancy. It is a measure of the percent of pregnant women who utilize antenatal care services provided at the government health facility at least once during their current pregnancy.

This indicator indicates that how many pregnant women in the catchment area population are covered through the facility for antenatal care services. It reflects the integrity of referral linkages between LHW and the facility based health care providers, the extent of mobilization of pregnant women or their families to utilize maternal health services from the government health facilities and or the trust of the community on the public health facilities/providers. It will also provide information about the registration of pregnant women in health facilities for availing the ANC-1 services.

S.No	District	Apr	May	Jun	Avg
1	Swat	8012	6245	8006	7421
2	Haripur	5724	5410	4224	5119
3	Mardan	5229	6769	3340	5113
4	Mansehra	4875	4800	3344	4340
5	Peshawar	3771	4259	3843	3958
6	Malakand	4378	3573	3239	3730
7	Battagram	4247	3490	2954	3564
8	Swabi	3570	4474	2631	3558
9	D.I. Khan	3717	3596	3198	3504

24	Toor Ghar	268	254	200	241
25	Kohistan	192	141	193	175
Total		78041	76165	60476	71561

Table and Graph illustrates the statistical analysis about data regarding First Antenatal care services (ANC-1) in government health facilities. District Kohistan and Tor Ghar show worst performance with an **average 241** and **175** ANC-1 coverage in 2nd quarter 2018.

Swat, Haripur, Mardan, Mansehra and Peshawar are the top performer among 25 districts 2nd Quarter 2018.

9. District Wise Average Number of Deliveries in the government health facilities

This indicator is reflective of the confidence shown by the general public in the government health facilities for carrying out normal deliveries.

S.#	District	Apr	May	Jun	Avg
1	Swat	2420	1582	2689	2230
2	Bannu	1237	1320	1479	1345
3	Malakand	1418	1465	1144	1342
4	Mardan	1112	1041	1037	1063
5	Kohat	850	954	1035	946
6	Peshawar	860	898	1053	937
7	Abbottabad	827	870	818	838
8	Swabi	738	969	808	838
9	Dir Lower	403	339	1642	795
10	Buner	695	817	857	790
11	Haripur	712	765	785	754
12	Charsadda	933	214	959	702
13	Chitral	683	668	739	697
14	Dir Upper	719	503	775	666
15	Mansehra	633	646	640	640
16	Battagram	564	570	622	585
17	Karak	384	460	422	422
18	Shangla	361	395	416	391
19	Lakki Marwat	361	447	356	388
20	Hangu	322	404	403	376
21	Nowshera	313	350	361	341
22	Tank	261	210	244	238
23	D.I. Khan	244	189	214	216
24	Kohistan	88	85	124	99
25	Toor Ghar	33	43	44	40
Total		17171	16204	19666	17680

District Swat is on top position of all 25 districts with number of average deliveries **2230** in government health facilities in the quarter. Districts Bannu, Malakand, Mardan, Kohat and Peshawar reported **1345, 1342, 1063, 946 and 937** average numbers of deliveries conducted in the government health facilities thereby giving best performance.

The poor arrangement in primary and secondary health facilities in government sector and tertiary care hospitals needs to be improved. Figures from tertiary hospitals are not added to these figures; if added these figures will change significantly.

MTI Hospitals are not included in this list.

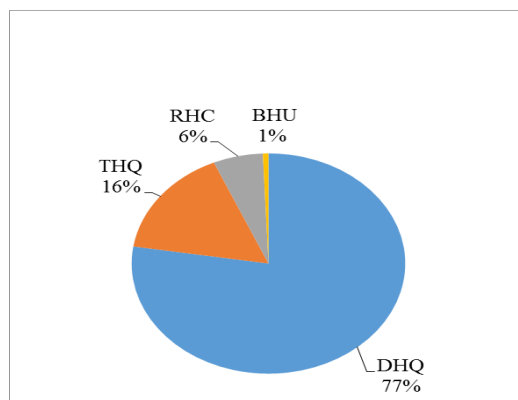

10. Health Facility-wise Number of Deliveries

This indicator reflects health facilities wise number of deliveries and the DHQ hospital stand **19,180**, which is **79%** of the total, THQ **3,995 (16%)**, RHC reports **1055 (4%)**, and BHUs reports only **162 (1%)** deliveries.

Deliveries in DHQ	Deliveries in THQ	Deliveries in RHC	Deliveries in BHU
18,958	3916	1437	160

W&C Hospital and DHQ Hospital (MTI) Bannu not reported data.

11. Anemia among Women Coming for ANC-1 in Govt: Health Facilities (in %age)

Pregnant women coming to the facility for antenatal care serve as a sample of women from the catchment population. The nutritional status among this sample of pregnant women is suggestive of the nutritional status of women in the catchment population.

S.No	DISTRICT	(ANC-1) visits in the facility	women with Hb. under 10 g/dl	%age
1	Haripur	15358	9529	62
2	Battagram	10691	3477	33
3	Mansehra	13019	3810	29

The indicator District-wise Family Planning Services & Commodities Provided is one of the most important indicator in health services. This reflects the results of all of the districts and show that which family planning services has taken by the couple.

In the modern method of the family planning services, the condom is one of the most effective and simple method and couple preferred to take this services from health institutions.

Some of the couple preferred to take other family planning services i.e. COC cycles, POP Cycles or DPMA injections etc.

14. Immunization Status

Immunization is the process whereby a person is made immune or resistant to an infectious disease, typically by the administration of a vaccine. Vaccines stimulate the body's own immune system to protect the person against subsequent infection or disease.

Immunization is a proven tool for controlling and eliminating life-threatening infectious diseases. It is one of the most cost-effective health investments, with proven strategies that make it accessible to even the most hard-to-reach and vulnerable populations. It has clearly defined target groups; it can be delivered effectively through outreach activities; and vaccination does not require any major lifestyle change.

a. Children under 12 m received 3rd Pentavalent vaccine

Pentavalent vaccine is five individual vaccines conjugated in one intended to actively protect infant children from 5 potentially deadly diseases: Haemophilus Influenza type B (a bacteria that causes meningitis, pneumonia and otitis), whooping cough, tetanus, hepatitis B and diphtheria.

S#	DISTRICT	Population	Expected Children	Children under received 3rd Pentavalent vaccine	%age

b. Children under 12 Months received 1st Measles vaccine

Measles, also known as morbilli, rubeola or red measles, is a highly contagious infection caused by the measles virus. Measles is an airborne disease which spreads easily through the coughs and sneezes of those infected. Testing for the virus in suspected cases is important for public health efforts.

Following data reflects children under 12 Months of age getting 1st Measles Vaccine. Percentage is also computed to rank the performance of districts.

15. Malaria Cases Slide Positivity Rate

As malaria control efforts intensify, it is critical to monitor trends in disease burden and measure the impact of interventions. A key surveillance indicator is the incidence of malaria. The slide positivity rate (SPR) has been used as a surrogate measure of malaria incidence, but limited data exist on the relationship between SPR and the incidence of malaria.

a. Malaria Parasite

This indicator measure the proportion of blood slides tested positive for Malaria.

The **malaria parasite** produces a molecule that affects red blood cells, luring mosquitoes to bite infected people, and may enhance the parasite's spread.

Malaria parasites are spread by bites from infected mosquitoes. **Mosquirix** (a recombinant protein-based malaria vaccine) relies on a single protein from the **malaria parasite** to induce immunity.

Plasmodium falciparum is a protozoan parasite, one of the species of **Plasmodium** that cause malaria in humans. It is transmitted by the female Anopheles mosquito of the six malarial parasites.

Plasmodium falciparum causes the most-often fatal and medically severe form of disease.

16. Intensive-Phase TB-DOTS Patients

Tuberculosis requires regular and uninterrupted treatment for a cure and a person missing the treatment poses a great threat for developing a resistant form of the disease; so the number of patients missing their treatment for more than a week needs to be actively traced and convinced to continue the treatment.

17. Proportion of Intensive phase TB-DOTS patients missing treatment >1 week

This indicator measures the proportion of TB-DOTS intensive phase patients missing treatment more than one week. This is the suggestive of the performance of the TB-DOTS treatment center and the associated treatment supporters.

Under TB-DOTS, if a patient misses his/her treatment for more than 2 consecutive days during the initial intensive phase, he must be traced by the health worker or by the treatment supporter. In the continuation phase of treatment, if patient fails to collect his drugs within one week of drug collection day she/he must be traced by health workers.

18. Mortality Rate

Mortality rate or death rate is a measure of the number of deaths (in general, or due to a specific cause) in a particular population, scaled to the size of that population, per unit of time.

Through mortality rates there is an opportunity to get a clear picture of the preventable and the non-preventable causes, enabling the department to concentrate on the prevention of death due to avoidable causes.

a. Neonatal Deaths in the Facilities

A neonatal death is the death of a baby within the first 4 weeks of life.

Number of Neonatal deaths due to various causes during the deliveries or immediately afterwards Two assumptions have to be made here, one is that this report includes deaths occurring in government health facilities only and the second is the non-availability of data on predispositions in the mother resulting in these fatalities.

[Over Neonatal Mortality Rate is 15 of the province]

Districts Lakki Marwat to Malakand reported zero (0) Maternal deaths in their respective districts in quarter.

c. Infant Mortality Rate per 1000 Population (Reported by LHW)

Infant mortality refers to deaths of children, typically those less than one year of age. It is measured by the infant mortality rate (IMR), which is the number of deaths of children under one year of age per 1000 live births.

The leading causes of infant mortality are birth asphyxia, pneumonia, term birth complications, diarrhea, malaria, measles and malnutrition.

[Over all Infant Mortality Rate is 17 of the province]
