

DISTRICT HEALTH INFORMATION SYSTEM

Evidence Based Decision Making

Annual Report
2023

Annual Report 2023

1. REPORTING COMPLIANCE

This indicator represents the percentage of public health facilities that have submitted monthly reports.

District Wise Percentage of Reporting Compliance.

Graph shows district-wise reporting compliance of all the districts of Khyber Pakhtunkhwa. Thirty Seven (37 Including FRs) districts (D.I. Khan to Tor Ghar) among all districts achieved the target i-e reporting more than 95% while FR Bannu, North Waziristan, FR Lakki and FR Tank reported 94%, 93%, 85 and 64%, remained below the target.

2. General OPD Attendance (Primary Health Care Facilities & Secondary Health Care Facilities)

This is one of the key indicator to assess performance on the provision of health services in Province Khyber Pakhtunkhwa. It refers to the number of people attending and receiving services at health facilities during illness.

Graph shows the General OPD in primary and secondary care health facilities with gender wise breakup of male and female patients of the province.

Age wise breakup of patients visiting the OPD is consistent from January to December 2023, the figure shows that in the case of male OPD attendance of age group from <1 to 14 years is **7,910,048 (48.05%)** while in case of male age group from 15 years and above is **8,552,787** among the total male OPD **16,462,835**. Similarly in case of female OPD attendance of age group from <1 to 14 years is **7,628,671 (37.49%)** while in case of female age group from 15 years and above is **12,718,519** among the total female OPD attendance of **20,347,190**.

In OPD Attendance (Primary & Secondary Health Care Facilities) **55.28%** were female and **44.72%** were male patients who have visited in year 2023.

3. Specialty Wise Break Up of Patients

This indicator gives us an idea about the distribution of patients to different specialties enabling the reader to broadly categorize and assess the flow of patients to different specialties available in the health facilities.

Graph of the indicator **OPD Attendance Specialty wise** shows the percentage of total new patients visits of the facility to different specialties (i.e General OPD, Medicine, Surgery, Pediatric etc). Under the specialty; emergency/casualty, the number and percentage of patients are on top and stands at **6495522 (28%)** of the total Specialty OPD.

Specialty	New Visits	%age
Emergency/Casualty	6495522	28%
General OPD	3368844	15%
Pediatric	3011392	13%
Medicine	2109338	9%
OB/GYN	1695490	7%
Others	983651	4%
Orthopedics	967188	4%
Surgery	923923	4%
Dental	800740	3%
Eye	782519	3%
Skin	779636	3%
ENT	744525	3%
Cardiology	347953	2%
Pshychiatry	78933	0.3%
Homeo Cases	60678	0.3%
Tibb/Unani	59789	0.3%
Total	23125919	

Number of patients in the specialty of Emergency/Casualty and General OPD are **6,495,522** and **3,368,844** which is **28%** and **15%**.

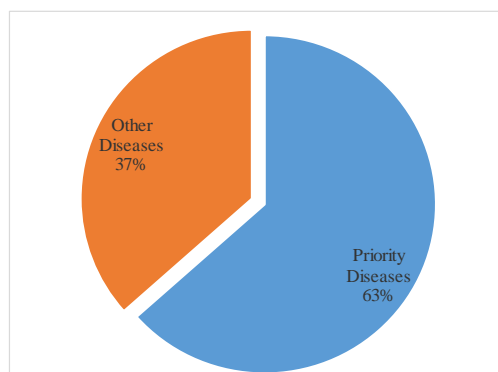

The disorder of Pediatric and medicine stands at **3,011,392 (13%)** and **2,109,338 (9%)**.

The Specialty of **Gynea/OBS** and **Orthopedics** reported **1,695,490 (7%)** and **967,188 (4%)**.

4. Diseases Pattern in Out Patient Department (43 priority diseases)

This indicator will help to understand which disease/cases were attended at the health facilities in a district.

The indicator can trigger a response in terms of additional resource allocation or redistribution of resources according to the disease pattern, or initiating specific preventive, promotive and or curative services at specific area/catchment population. 43 diseases have been selected as “Priority Diseases” in consultation with other stakeholders, the Government of Khyber Pakhtunkhwa has adopted these priority diseases in continuation to the national decision. These diseases are listed in the below table, which present the numbers of patients provided health care services at Primary and Secondary Level Health Facilities.

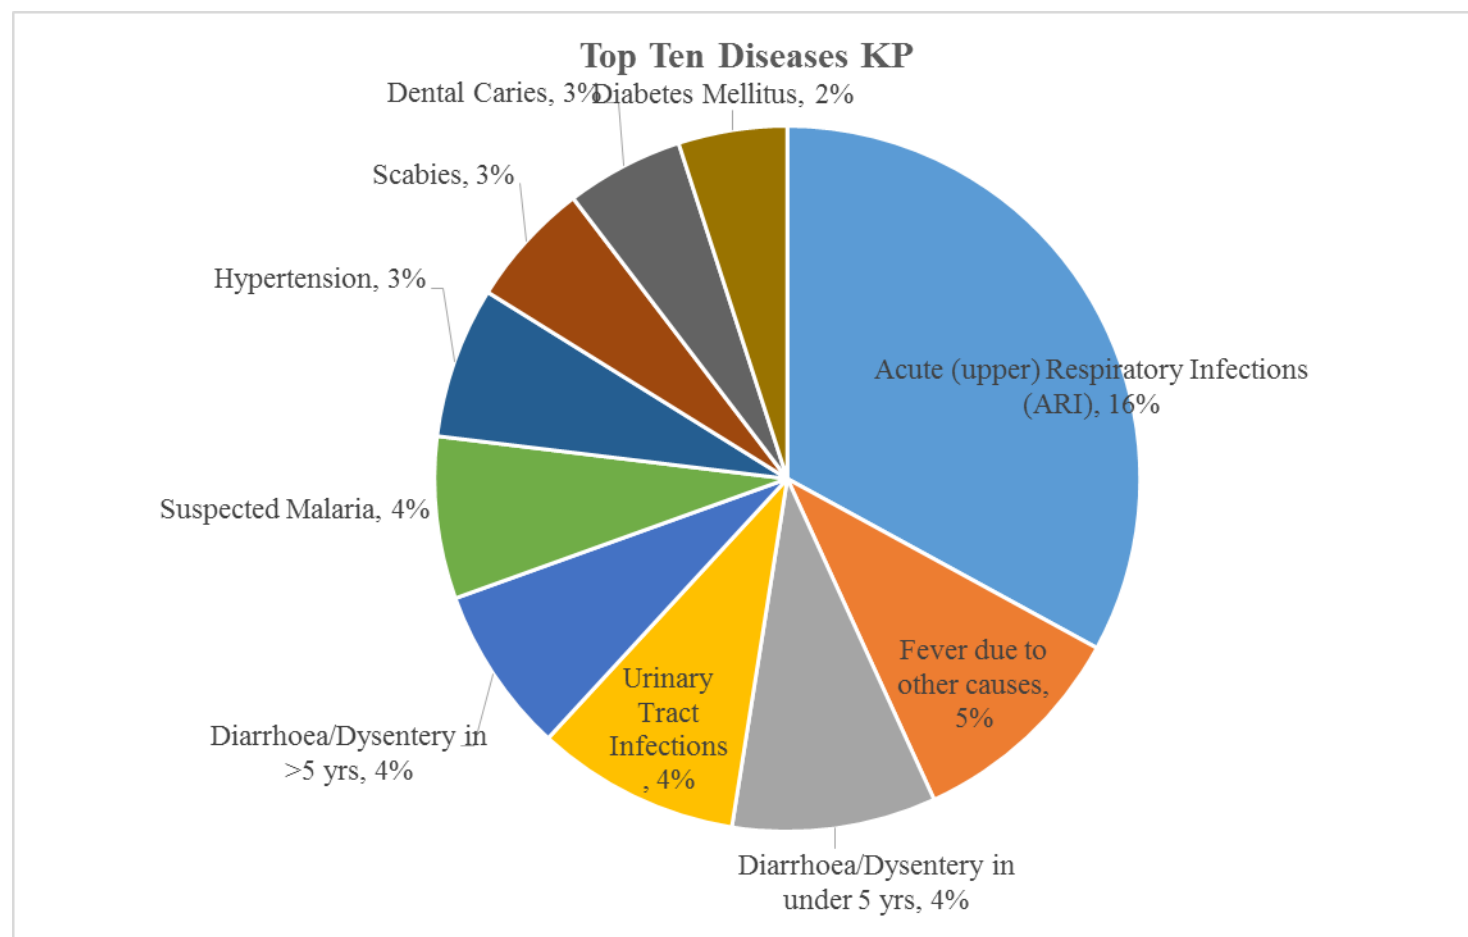

Pie chart shows percentage of Priority diseases (**63%**) and other diseases (**37%**)

Total OPD (January to December 2023)		31761693

Total		20144223	63%

Table shows the overall numbers of priority diseases from January to December 2023.

The top Ten Diseases (among 43 priority diseases) reported in Khyber Pakhtunkhwa Province;

5. COMMUNICABLE AND NON COMMUNICABLE DISEASES

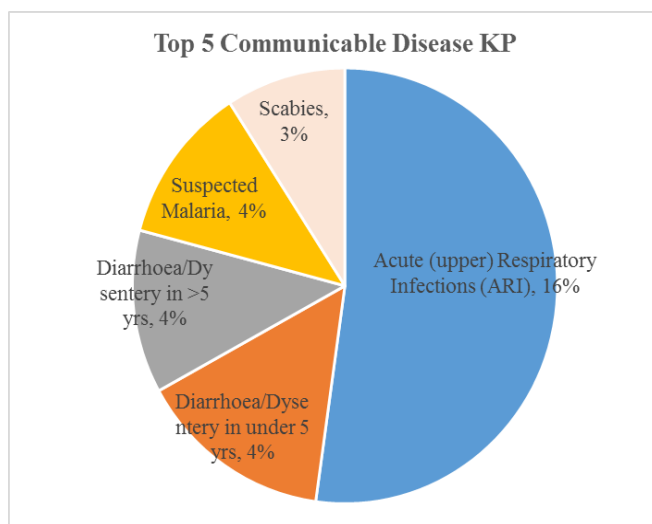

Out of 43 priority diseases, 19 are communicable and 24 are non-communicable diseases. Subsequent analysis shows the most common diseases and disease-wise breakup.

a. COMMUNICABLE DISEASES

Communicable disease is an infectious **disease** transmissible (as from person to person) by direct contact with an affected individual or the individual's discharges or by indirect **means** (as by a vector).

Table shows the number & percentage of Communicable Diseases (January to December, 2023).

Total OPD		31761693	
S. No	Diseases	Total	%age
1	Acute (upper) Respiratory Infections (ARI)	4973412	16%

19	Suspected HIV/AIDS	63	0.0002%
Total		11284553	36%

Pie chart shows Top 5 Communicable Diseases in Khyber Pakhtunkhwa.

b. NON-COMMUNICABLE DISEASES

A **non-communicable disease** (NCD) is a medical condition or **disease** that is not caused by infectious agents (**non-infectious** or **non-transmissible**). NCDs can refer to chronic **diseases** which last for long periods of time and progress slowly. **NCDs are the leading cause of death globally.**

Total OPD		31761693	
S. No	Diseases	Total	%age
1	Fever due to other causes	1539981	5%
2	Urinary Tract Infections	1408960	4%

Total		8859670	28%

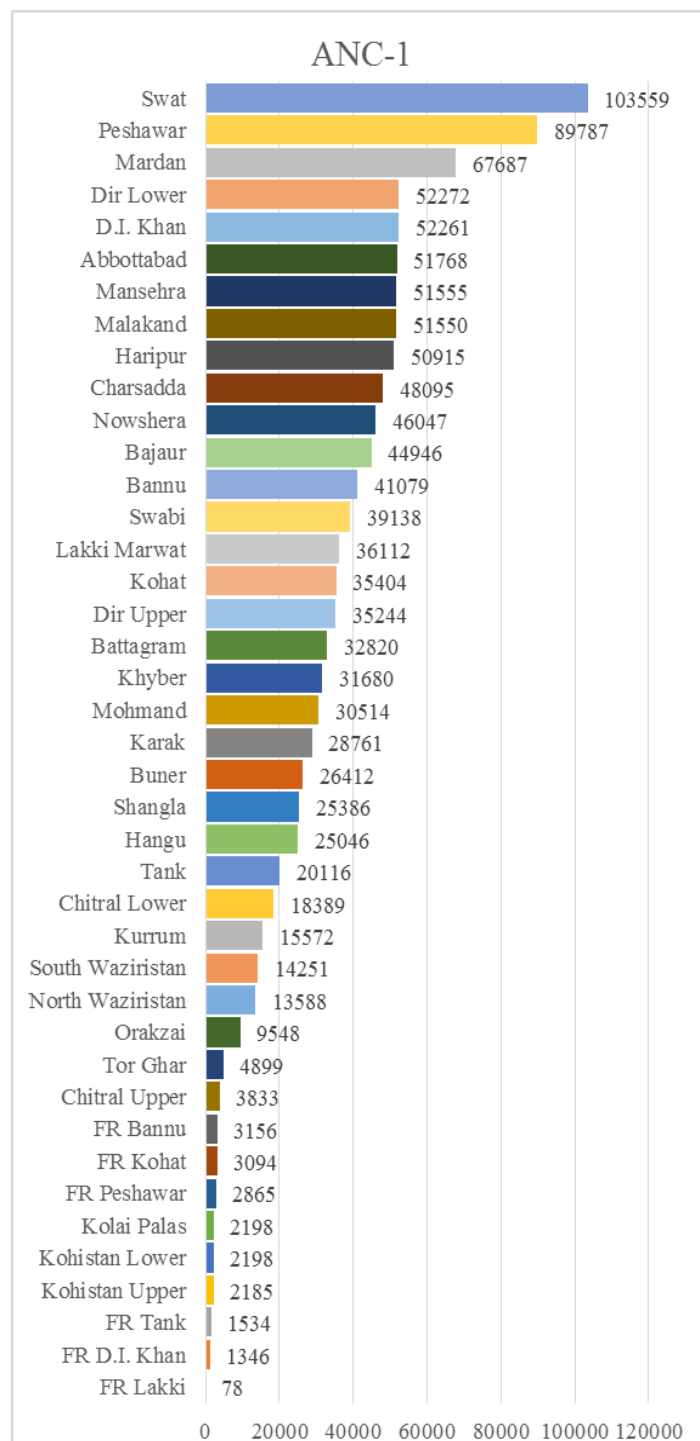

Table and Graph illustrates the trend of non-communicable diseases in Khyber Pakhtunkhwa province during January to December 2023.

6. Average number of Antenatal Care Services in the Health Facility

Antenatal care is an indicator of access and utilization of health care services during pregnancy. It is a measure of the percent of pregnant women who utilize antenatal care services provided at the government health facility at least once during their current pregnancy. **Table and Graph** illustrates the statistical analysis about data regarding First Antenatal care services (ANC-1) in government health facilities. Swat, Peshawar, and Mardan have the most numbers among all the districts.

S. No	District	ANC-1
1	Swat	103559
2	Peshawar	89787
3	Mardan	67687
4	Dir Lower	52272
5	D.I. Khan	52261

39	FR Tank	1534
40	FR D.I. Khan	1346
41	FR Lakki	78
Total		1216888

ANC-1 indicator indicates that how many pregnant women in the catchment area population are covered through the facility for antenatal care services. It reflects the integrity of referral linkages between LHW and the facility-based health care providers, the extent of mobilization of pregnant women or their families to utilize maternal health services from the government health facilities and or the trust of the community on the public health facilities/providers. It will also provide information about the registration of pregnant women in health facilities for availing the ANC-1 services.

7. District Wise Average Number of Deliveries in the government health facilities

This indicator is reflective of the confidence shown by the general public in the government health facilities for carrying out deliveries. (January to December, 2023);

District	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Average
Swat	2687	2547	2643	2698	2484	2495	2645	2424	2194	2738	2861	1535	2496

10. Intensive-Phase TB-DOTS Patients

Tuberculosis requires regular and uninterrupted treatment and a person missing the treatment poses a great threat for developing a resistant form of the disease; so the number of patients missing their treatment for more than a week needs to be actively traced and convinced to continue the treatment.

Under TB-DOTS, if a patient misses his/her treatment for more than 2 consecutive weeks during the initial intensive phase, he/she must be traced by the health worker or by the treatment supporter.

In the continuation phase of treatment, if patient fails to collect his drugs within one week of drug collection day, she/he must be traced by health workers.

12. Immunization Status (from EPI Indicator)

Immunization is the process whereby a person is made immune or resistant to an infectious disease, typically by the administration of a vaccine. Vaccines stimulate the body's own immune system to protect the person against subsequent infection or disease.

Immunization is a proven tool for controlling and eliminating life-threatening infectious diseases. It is one of the most cost-effective health investments, with proven strategies that make it accessible to even the most hard-to-reach and vulnerable populations. It has clearly defined target groups; it can be delivered effectively through outreach activities; and vaccination does not require any major lifestyle change.

a. Children under 12 months received 3rd Pentavalent vaccine

Pentavalent vaccine is five individual vaccines conjugated in one intended to actively protect infant children from 5 potentially deadly diseases: Haemophilus Influenza type B (a bacteria that causes meningitis, pneumonia and otitis), whooping cough, tetanus, hepatitis B and diphtheria.

b. Children under 12 months received 1st Measles Vaccine

Measles, also known as morbilli, rubeola or red measles, is a highly contagious infection caused by the measles virus. Measles is an airborne disease which spreads easily through cough and sneezes of those infected. Testing for the virus in suspected cases is important for public health efforts. Following data reflects children under 12 Months of age getting 1st Measles Vaccine. Percentage is also computed to rank the performance of districts.
